

Gas Services Business Unit Customer Service

Pembina Gas Services Business Unit provides sweet and sour gas gathering, compression, condensate stabilization, and both shallow cut and deep cut processing services for its customers, primarily on a fee-for-service basis under long-term contracts. The majority of condensate and NGL extracted through these facilities are transported by assets in Pembina's Pipelines Division. A portion of the volumes are further processed at Pembina's fractionation facilities. GBU also has equity interest in the Veresen Midstream (VMLP) assets and operates their Hythe and Steeprock facilities.

Assets at A Glance:

- **Cutbank Complex:** Shallow cut and deep cut sweet and sour gas processing facilities located near Grande Prairie, Alberta.
- **Saturn Complex:** Deep cut sweet gas processing plants facilities near Hinton, Alberta.
- **Resthaven:** a raw to deep cut sweet gas processing facility located near Grande Cache, Alberta.
