

Important Information

For Excavators, Contractors and Developers

This brochure contains information about pipeline safety to keep communities safe and prevent damage to pipelines owned or operated by Pembina Pipeline Corporation or one of its subsidiaries (Pembina U.S.).

This brochure contains information for those carrying out ground disturbance activities near Pembina U.S.'s pipelines. Excavators, contractors and developers play an important role in reducing the likelihood of damage to underground infrastructure.

Following the best practices outlined in this brochure and digging with CARE will ensure the safety of those conducting work on or near our pipelines, and those who live in the communities where we operate.

About Pembina U.S.

We are a leading North American transportation and midstream service provider. For 65 years, we have been safely and reliably connecting oil, natural gas, and natural gas liquids production to markets that need it. Pembina U.S. owns an integrated system of pipelines that transport various hydrocarbon liquids and natural gas products. We also own gas gathering and processing facilities, and an oil and natural gas liquids infrastructure and logistics business.

Pipelines are a safe and efficient means of transporting large quantities of crude oil, natural gas and natural gas liquids. Pembina U.S.'s pipelines and facilities are designed, constructed, and operated in a safe and environmentally responsible manner.

We know that maintaining the integrity of our pipelines is essential to the health and safety of the communities in which we operate. A commitment to safety is a shared responsibility between us and all our stakeholders, including the digging community.

Our pipelines

U.S. pipeline systems

In 2019, Pembina U.S. acquired ownership of the U.S. portion of the Cochin Pipeline System, which transports condensate, from Kinder Morgan. The U.S. portion of the Cochin Pipeline System is owned and operated by Pembina Cochin LLC, an affiliate of Pembina U.S. Corporation.

The U.S. portion of the Vantage Pipeline and the West Spur Lateral pipelines are high vapor pressure (HVP) pipes that transport ethane. Vantage Pipeline US LP (Vantage) is the owner and operator of the Vantage Pipeline and the West Spur Lateral. Vantage is an affiliate of Pembina U.S. Corporation.

What is condensate?

Condensate is a low-density mixture of hydrocarbon liquids. It is typically used as a diluent in heavy oil production. Because condensate is typically liquid in ambient conditions and also has very low viscosity, it is often used to dilute highly viscous heavier oils that cannot otherwise be efficiently transported via pipelines.

What is ethane?

Ethane is a hydrocarbon that is isolated from natural gas. The petrochemical industry uses raw materials such as benzene, ethane, and propane from the oil and gas industry to manufacture products that we use every day. The Vantage Pipeline and the West Spur Lateral transport ethane, which is most commonly used to produce ethylene and polyethylene. These chemicals are needed to manufacture products like plastic, automotive antifreeze, and detergent.

Pipelines are safe and reliable

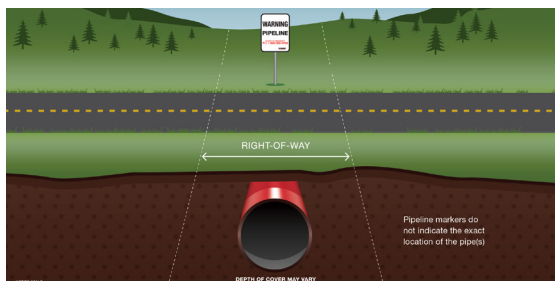

We conduct regular inspections, maintenance, and testing to confirm that our pipelines are operating safely. We monitor the operating conditions of the pipeline through sensors 24/7/365 from our state-of-the-art control room. We conduct aerial and ground inspections to ensure our systems are operating safely and to identify unsafe or unauthorized activity which could damage the pipe or impact safe operations.

We reinforce our commitment to excellence in safety in our daily operations by developing stringent standards and reviewing potential hazards, in addition to conducting regular safety meetings, contractor screenings, and inspections.

Pembina U.S. takes many steps to ensure safe and reliable operations which include a strict adherence to an Integrity Management Program and continuous monitoring and maintenance. Damage from third-party excavation and construction activities around pipelines is the most common cause of damage to pipelines. That's why safety is a shared responsibility and members of the digging community and the public have a role to play to protect pipelines from damage.

Right-of-Way

Regulations restrict certain activities near the Right-of-Way (ROW) that could pose a threat to public safety and the safe operation of the pipeline.

Working and digging near pipelines

Markers should never be used to identify the location of a pipeline before excavating. Always call **811** or your local One-Call Center at least 48 hours, or as indicated by your local One Call centre, as dictated by state law, before excavating to have pipelines and underground utilities located and marked. Once they are identified, respect the marks and dig carefully near the pipeline.

Pipeline markers

Pipeline markers are located along the pipeline right-of-way. Markers identify the area, but not the exact location or depth of the pipeline. They also specify the product transported, the operator's name and emergency contact number. ONLY a Pembina U.S. representative can identify the exact location of the pipeline.

Here are some examples of what our signage looks like.

Techniques for digging near a pipeline

Follow the excavation requirements of your State One-Call Law and Common Ground Alliance Best Practices.

Consider the following methods when digging near a pipeline: hand digging, soft digging, vacuum excavation methods and pneumatic hand tools. Non-invasive methods may be used for pavement removal. A Pembina field representative may be required to monitor excavation activity at the job site and can help you determine the most appropriate digging method. Alert Pembina if work crews will be crossing the right-of-way with motorized equipment or vehicles.

Planning work around pipelines

Some of the biggest threats to pipeline safety come from unauthorized construction, development, encroachment and digging activities. Notifying Pembina U.S. and your local One-Call Centre are your first steps to preventing damage to underground infrastructure and working safely around pipelines.

Written consent from Pembina U.S. must be received before any of the following activities can occur:

- construction of a facility across, on, along, or under a pipeline (including the ROW)
- ground disturbance activities (excavation or digging)
- operation of a vehicle or mobile equipment across a ROW, outside the travelled portion of a highway or public road
- using explosives within 300 meters or 1,000 feet of Pembina U.S.'s pipeline ROW
- any activity that the company deems may negatively impact the safety of the pipeline

Always have a copy of your agreement onsite. It informs us of your activity and allows us to provide guidance to prevent incidents or damage to our pipelines.

What is Excavation?

Excavation activities include any work, operation or activity that results in the disturbance of the earth. These activities include but are not limited to:

Tree planting	Auguring
Building a fence or pounding in posts	Topsoil stripping, levelling, grading
Excavating, trenching, digging	Quarrying, seismic exploration, blasting
Plowing or tilling	Installing drain tiles
Tunnelling, boring, drilling	Ditching

How to obtain written consent

Steps to obtain written approval from Pembina U.S.

1. Email landrequests@pembina.com with your name, legal land description, and a description of the work you would like to do.
2. Pembina U.S. will contact you and walk you through how to submit a request for permission to proceed with your activity in, along or adjacent to the ROW.
3. Pembina U.S. will review your request once your information has been received. Pembina U.S. may:
 - grant consent with standard conditions
 - grant consent that requires specific conditions be met to ensure safety
 - work with you to find solutions and resolve issues regarding the consent request
 - deny consent in the rare situation that a feasible safety solution cannot be found.
4. Once consent has been granted, you must:
 - make a locate request to your local One-Call Centre at least 48 hours, or as indicated by your local One Call centre, before beginning the work. Pembina U.S. will arrange for a Company representative to be on site to inspect the area at time of crossing.
 - always keep the written consent and documentation onsite.
 - follow all terms and conditions laid out in the consent, and all instructions from Pembina U.S. personnel onsite.

If you have additional questions,

please contact Pembina U.S. toll free at 1-888-428-3222 and we will work with you to address your needs.

Dig with CARE

Before starting any work near the ROW, a locate request to your local One-Call Center is required. The One-Call Center will notify owners of the buried infrastructure in the area who will send out a company representative to locate and mark the facilities using paint, flags or other marks. A Pembina U.S. representative may contact you to discuss your planned activities.

Click Before You Dig

You can access the nearest One-Call Center to make a locate request anywhere in North America at:
clickbeforeyoudig.com.

Allow Required Time for Marking

Allow 3-5 business days. Check with you local One Call Center for location specific timing.

Respect the Marks

Lines are marked by flags, paint or other markers (normally yellow for pipelines)

Excavate Carefully

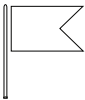

Hand dig to determine exact location of a pipeline. A Pembina U.S. representative must be present.

Know what's below.
Call before you dig.

Know the Color Code

The colored flags or paint you will see once the lines have been located mark the location and type of underground utility:

White – proposed excavation

Pink – temporary survey markings

Red – electric power lines, cables, conduit and lighting cables

Yellow – gas, oil, steam, petroleum or gaseous material

Orange – communication, alarm or signal lines, cables or conduit

Blue – potable water

Purple – reclaimed water, irrigation, and slurry lines

Green – sewers and drain lines

Although rare, emergencies can occur. To prepare for these instances, Pembina U.S. participates in an Emergency Management Program (EMP), which includes comprehensive standards and processes to support the safety of the public, our workers and the environment.

The EMP evaluates potential hazards from our operations as well as other hazards such as security breaches and natural disasters. Our comprehensive evaluation provides the foundation for our approach of prevention, planning, response and recovery. This approach allows for a safe and effective response to an incident. Emergency Plans are maintained for Pembina U.S.'s facilities and products. These plans identify the organizational structure, equipment, and resources necessary to ensure that actions are taken for the protection of the public, employees and the environment. Pembina U.S. conducts ongoing responder training, exercises, and public consultation to ensure continuous improvement of our plans and program and that our personnel are ready to respond to emergencies.

A copy of Pembina U.S.'s Corporate Emergency Management Plan can be found at:
<https://www.pembina.com/sustainability/safety/emergency-preparedness/>.

What to do if you strike a pipeline

Whether it appears there is damage or not, follow these steps:

1. Stop all excavation and construction work and move away from the area on foot; let others know to do the same
2. Shut off all equipment and machinery
3. Call 9-1-1 as soon as you are in a safe location
4. Call Pembina U.S.'s emergency number 1-800-360-4706 and explain the situation
5. Do NOT attempt to operate any valves

How to spot a pipeline release

In the unlikely event of a release, ethane enters the atmosphere as a hazardous and flammable gas. Contact with ethane may cause skin irritation and/or frostbite. Exposure to ethane may cause headache, dizziness or nausea. At very high concentrations, ethane can cause suffocation due to the lack of oxygen in the air.

In the unlikely event of a release, condensate is a hazardous and extremely flammable liquid. Contact with condensate may cause headache, nausea, dizziness, skin and eye irritation.

Know the warning signs

Although rare, it is important to know the warning signs of a pipeline release:

You might see:

- a pool of black liquid or oily sheen on a water surface
- dead or dying vegetation in an otherwise green area
- dirt being blown or appearing to be thrown into the air
- a white vapor stream or mist-like cloud over the pipeline
- unexpected frost or ice on the ground
- discolored snow or vegetation
- a moist patch or pool of clear, light brown or yellow liquid

You might hear:

- an unusual hissing, blowing, or roaring noise

You might smell:

- a petroleum or hydrocarbon smell similar to gasoline or diesel fuel

If you suspect a release

In the unlikely event of an emergency, Pembina will immediately shut down the pipeline if necessary and activate our Emergency Management Plan.

If you recognize any of the warning signs:

- abandon any mechanized equipment and move as far away from the leak as possible, avoiding contact with escaping liquids and gases
- call 9-1-1
- call Pembina's emergency line that you see on a pipeline marker
- follow instructions provided to you by Pembina and local emergency responders

What you shouldn't do

- do not touch or go near any liquid, gas or vapor cloud
- do not start your vehicle or any equipment that could be a potential ignition source
- do not smoke or light a match, and avoid heating sources or making sparks
- do not turn on or off anything that may create a spark, including cell phones, pagers, flashlights, keyless entry remotes, vehicle alarms, and light switches, until you are in a safe location
- do not attempt to operate or turn pipeline valves
- do not attempt to extinguish any flames or fires

How to obtain more information about pipelines and pipeline operators where you work or live.

The National Pipeline Mapping System (NPMS) is an on-line mapping tool available to the public that enables you to view information on transmission pipelines that are under Department of Transportation (DOT) and Pipeline and Hazardous Materials Safety Administration (PHMSA) jurisdiction. By accessing the NPMS, you can view information on a county by county basis and obtain information on which transmission pipelines operate in your community. You can also obtain contact information for pipeline operators in your area. The NPMS can be accessed here: <https://www.npms.phmsa.dot.gov/>

Remember: The NPMS is not to be used to identify exact locations of pipelines. You must contact your local One-Call system before you start any digging activities.

24-hour emergency line: **1-800-360-4706**

If you notice any unusual or suspicious activity on or near the ROW, please report it by calling 9-1-1 and Pembina U.S.'s 24-hour emergency number above.

Call before you dig

Always call 811 or your local One-Call to have underground utilities marked.
